CAREER OBJECTIVE

To utilize advanced **data analytics skills**, including data visualization, predictive modeling, and statistical analysis, in material and demand planning control. Focus on **standardizing** workflows, **identifying** actionable business **insights**, and driving **continuous improvement** processes.

EDUCATION

Bachelor of Industrial Systems Engineering - Logistics **Sep 2020 - Nov 2024**

- Ho Chi Minh City University of Technology – Vietnam National University, with a GPA of 8.1/10
- Specialization: Manufacturing Planning and Improvement, including **Material and Demand**.
- Thesis: **"Two ways approach for Loan Default Prediction"**.

WORK EXPERIENCE

Vacuum cleaner planner, Samsung Electronics HCMC CE Complex May 2025 - Present

Key responsibilities

- **Planned daily production** and shipment based on line capacity, material availability, and SOP to meet delivery targets, manufacturing capacity, and quality performance.
- **Managed master data** (BOM, routing, tact time, customer data) and monitored production output, inventory, and ETD/ETA.

Key Achievements

- **Developed a VBA-**based planning automation tool to **auto-adjust tact time and re-validate daily plans** after Excel-to-system upload, eliminating quantity and production sequence discrepancies and reducing daily fine-tuning time by ~15% (~20 minutes).
- **Ensured 3-month production stability by performing demand simulations** and capacity planning, supporting manpower adjustment (hire/reduce), line configuration, and cross-functional alignment to mitigate production risks.

Material Planning and Control officer , Crystal Elegance Textiles Oct 2024 - April 2025

- **Reduced** decision-making time by **75%**, from 2 hours per 5 orders to 30 minutes, by developing **an Excel template for the yarn purchasing process**, including inventory, en-route quantity, knitted quantity, and yarn projection.
- Python was used to deploy an **EOQ and a safety stock model** for inventory management.
- Using PowerBI for a **Material Utilization Dashboard** to monitor and optimize resource usage.

Data Analyst intern, Workforce Optimizer **Feb 2024 - April 2024**

- Led the configuration of a **medical scheduling system** for medication officers, optimizing shift generation and driving **$5,000** in revenue.
- Used **DBeaver SQL** to collect and manage data, gaining a deeper understanding of the customer's required conditions and rules.

Digitalization intern, Kem Nghia Sai Gon **June 2023 - Sep 2023**

- Built an XGB machine learning model for **lead time prediction**, enabling accurate estimation of delivery dates for customers and improving production planning.
- Applied IoT with ZPL commands for **barcode printing** at QC stations, reducing handling time by **15%** and cutting costs by **88%** compared to traditional computer-based printing systems.

Math tutor **June 2022 - June 2023**

- Tutoring ninth-graders to boost their grades from 2-3 to 6-7 for high school entrance exams.

PERSONAL PROJECTS

Graduation thesis: Two ways approach for Loan Default Prediction ThangPhanML2002

- **The first method** evaluates **classification accuracy** using AUC and accuracy metrics for XGB, ADA, and MLP models, with **XGB** leading at 0.92 for both.
- **The second method** compares the **economic impact** of the XGB Classifier and Regressor across four financial indicators: Profit, Savings Cost, Missed Opportunity Loss, and Actual Loss. **The Regressor outperformed** by $1 billion in cost-benefit efficiency.

Leadtime Prediction in Kem Nghia Little Law Lead time prediction

- Applying pre-processing and feature engineering techniques to production datasets.
- Build the XGB model then run it via Flask API.
- Deploy it to a website by uploading the model on "Render.com".

Data-Driven Customer Segmentation at X Company: An RFM Approach RFM-analysis

- Challenge: High customer churn rate (20%), impacting revenue and profits
- Segmented customers and analyzed group characteristics.
- Proposed strategies to retain high-value customers and boost revenue.

SKILLS AND CERTIFICATIONS

- **Technical Skills:** Machine learning, SQL, Data Analytics skills
- **Certifications:**
  - TOEIC Listening & Reading - 850
  - TOEIC Speaking & Writting - 300
  - Data analyst in Python - Dataquest
  - Data Science for Business - DataCamp
